

Please continue to allow XM services to expand. I thoroughly enjoy all of the services that XM has offered which is why I became a subscriber after word of mouth advertisement from family members who already had the service. I only see XM getting better! The addition of Traffic & Weather is great since you don't have to wait for "Right after these messages" as heard on both AM and FM services. We as XM subscribers are PAYING for the service and we ought to continue to have that choice of local AM, FM, or terrestrial service in our cars and homes with what we listen to.

If XM and Sirius were not gaining momentum in popularity we would not be seeing the trend of automobile manufacturers offering built-in units with many models. Just like a cell phone or a land line we can choose to have one or the other but we still see each segment doing well. Satellite radio is the same - radio listeners can choose to subscribe to it or not. As technologies improve the service levels increase so please continue to allow XM that opportunity to expand.
